Community Awareness Program to Increase Influenza Vaccination

Influenza is an airborne disease that causes high morbidity and mortality annually

Flu is the highest killing vaccine preventable disease in the US with an estimated 56, 000 deaths yearly

Purpose of Project

Promoting general wellbeing of the community

Improve health literacy on influenza and chronic diseases

Minimize and eliminate beliefs, myths and other biases

Increase vaccination rate

Literature Synthesis

Appraisal of relevant evidence

9 peer reviewed articles selected from different databases

1 CDC expert review

Two articles chosen for appraisal include:

Monn's 2016 college influenza vaccination project

Fathi, Barati, Zandiyeh and Bashirian 2017 operating room infectious disease prevention project.

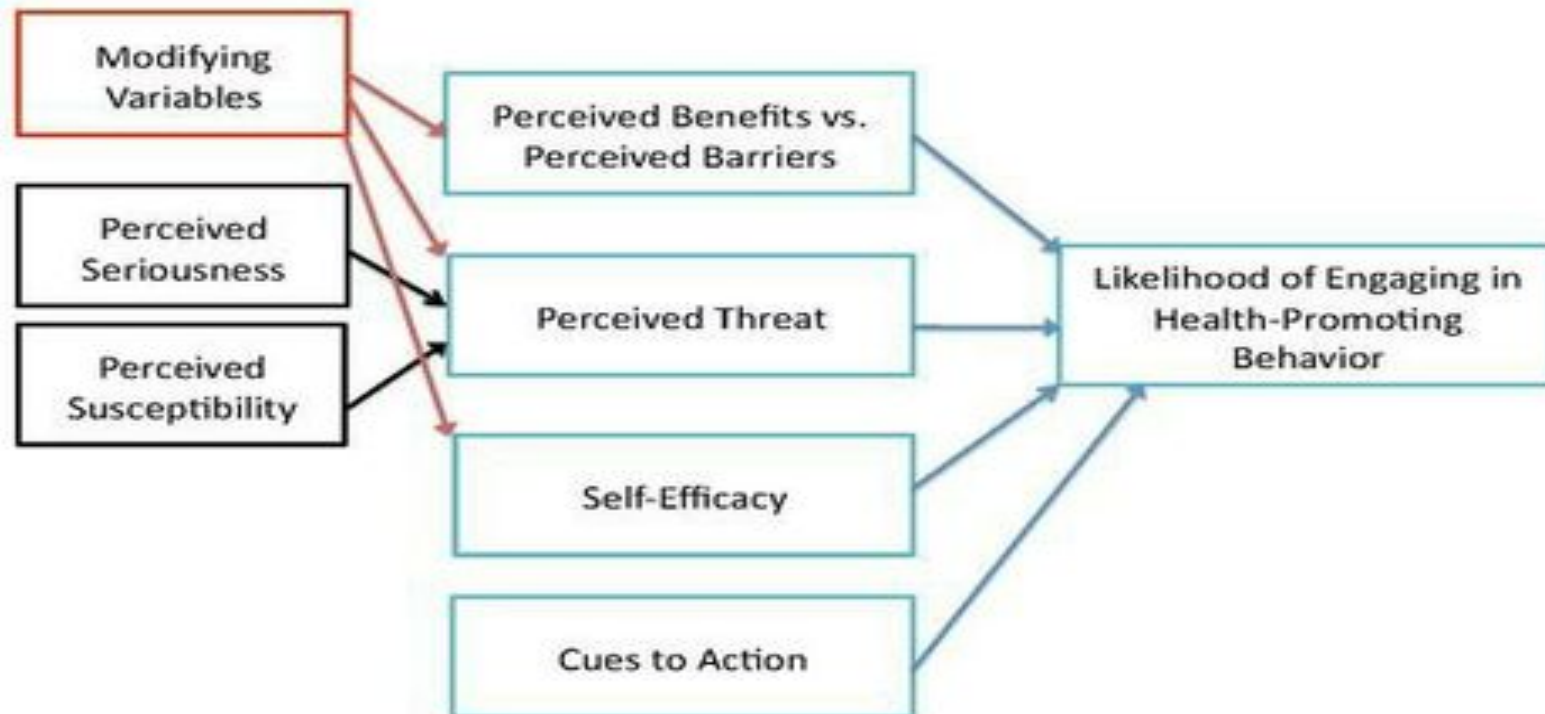

These 2 were critically evaluated using human evaluation to identify the overall satisfaction of the use of evidence in both studies.

From the appraisal both studies proved relevant to this project's success.
